## FCC WARNING

#### Class A for Ethernet Serial Server (Model SE5002 series)

This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and radiates radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expenses.

A shielded-type power cord is required in order to meet FCC emission limits and also to prevent interference to the nearby radio and television reception. It is essential that only the supplied power cord can be used.

Use only shielded cables to connect the device's ' RS-232 or RS-485 port.

Be cautioned that changes or modifications not explicitly approved by ATOP Technologies could void your authority to operate the equipment.

## 1 Introduction

Many industrial and Commercial devices equipped with slow serial communication ports RS-232, RS-485, and RS-422 are limited in their transmission distance of 15 m. Examples of these devices are PLC controllers, card readers, display signs, security controls, CNC controller, etc. ATOP Technologies has overcome the limit with a family of SE 5002 Series Ethernet Serial Servers. The SE 5002 sever family is designed to transmit data between one-or-more serial device and one-or-more TCP/IP device through Ethernet, and hence enhance the accessibility of the serial device through the ubiquitous TCP/IP based Ethernet.

Of the SE series, the SE 5002 is for RS 232/RS 422/RS 485 without isolation protection built-in, while the SE 5002-S55 is for RS 422 and RS 485 devices built-in isolation protection.

## 1.1. Packaging

Check your package to make certain it contains the following items:

- Atop SE5002 /SE5002-S55is Ethernet Serial Device Server x 1
- 5 pins Terminal Block for Serial Connector x 1
- 3 pins Terminal Block for Power Connector x 1
- Wall-mounting screws x 2
- Atop Wireless Serial Server quick start guide x 1
- Product CD containing configuration utility x 1

Optional Accessories :

- 1. Power Adapter DC Jack 12VDC,1.25A with Lock
- 2. Din Rail Kit DK-25

## 1.2. Modes of Operation

The SE 5002 Series can be operated in one of the following 4 modes:

**TCP Server Mode** : SE5002 can be configured in a TCP server mode on an Ethernet Network to wait for the host computer to establish a connection with the serial device ( the client). After the connection is established, data can flow in both directions (Fig.1 TCP Server Mode).

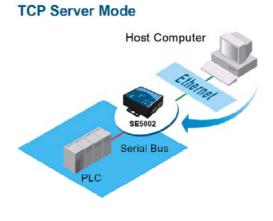

Fig. 1. TCP Server Mode

**TCP Client Mode** : SE5002 can be configured in a TCP client mode on a TCP/IP Network to actively establish a connection with an applications server –the host computer. After the connection is established, data can flow in both directions (Fig 2 TCP Client Mode).

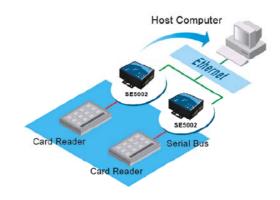

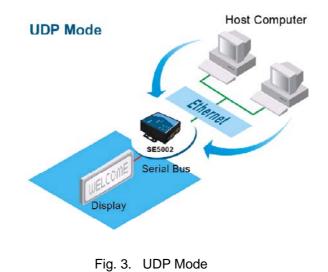

Fig. 2. TCP Client Mode

**UDP Mode**: UDP is a fast but non-guaranteed datagram delivery protocol. SE5002 can be configured in a UDP mode on a TCP/IP Network to establish a connection, using unicast or broadcast data to and from a serial device to one or multiple host computers (Fig 3 UDP Mode).

**Tunneling Mode(Pair Connection)**: The tunneling mode is used for multiple serial devices to "talk" to each other through SE 5002's and their Ethernet connections (Fig 4 Tunneling Mode). This mode is particularly useful when two serial devices are far away, because their communication distance is limited to 15 m.

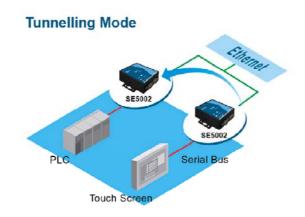

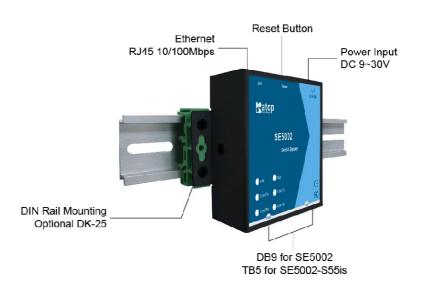

Fig. 4. Tunneling Mode

## 1.3. Hardware Description

#### NOTE:

- 1. **Model SE5002** is for RS-232/422/485 without isolation protection built-in; **SE5002-S55is** is for RS422/485 with isolation protection built-in. See Appendix A.3.1 for full Panel layout.
- 2. Press the reset button to reset to the default values

Fig. 5 Shows the interfaces and the DIN-Rail Mounting settings.

	Table 3. RUN LED Status

## 2.2 Installation Procedures:

<u>Step 1:</u> Connect SE5002 power source Jack. (Or to a 9~30VDC Terminal Block power source which only for SE5002-S55is)

<u>Step 2:</u> Connect SE5002 to the Ethernet network. Use a standard straight-through Ethernet cable when connected to a hub/switch, or connect to a PC's Ethernet port via a cross-over Ethernet cable. However, Always make sure ones PC is on the same sub-net as the SE5002.

<u>Step 3:</u> Connect SE5002's serial port to a serial device.

Step 4: Mount SE5002 to a wall/panel with the screws included or to a Din-Rail rack (Require optional Din-Rail-Kit).

## 3. Software

The SE5002 default parameters are shown in the following table.

Property	Default Value
IP Address	10.0.50.100
Gateway	10.0.254
Subnet Mask	255.255.0.0
User Name	admin
Password	Null(leave it blank)
COM 1	9600,None, 8, 1, No flow control, buffer disabled, packet delimiter timer 2ms
COM 2	9600,None, 8, 1, No flow control, buffer disabled, packet delimiter timer 2ms
Link 1	Type: TCP Server, Listen port 4660, Filter=0.0.0.0, Virtual COM disabled
Link 2	Type: TCP Server, Listen port 4661, Filter=0.0.0.0, Virtual COM disabled
SysName of SNMP	name
SysLocation of SNMP	location
SysContact of SNMP	contact

## 3.1 Configuration by SerialManager

Use **SerialManager** on product CD to configure the SE5002. First click "**Configuration**" (Fig. 6) then assign a static IP (Fig. 7).

SerialManager 79.U									×	
<u>S</u> earch	<u>F</u> irmwar	<u>C</u> onfiguration	S <u>e</u> curity <u>V</u> iev	/ <u>H</u> elp						
No.	Caution	Model		IP Address		MAC Address	Host Name		Kernel	^
1				10.0.9.0		00:60:E9:00:05:4B			V1.7	

Fig. 6. Configuring the static IP with SerialManager

Network Setting						
Please set the appropriate IP settings for this device						
DHCP (Obtain an IP automatically)						
IP address:	10 . 0 . 30 .100					
Subnet mask:	255.255.0.0					
Gateway:	10 . 0 . 0 .254					
Host name:						
	<u>C</u> ancel					

Fig. 7. Static IP dialog window

A DHCP server can automatically assign the IP address and all the network settings, and SE5002 supports the DHCP client functions. By default, the DHCP client function on SE5002 is disabled; one may activate the DHCP client functions by the following steps :

- → Execute SerialManager(Fig. 6)
- → Click on the IP address (of SE5002)
- → Click "Config" to pop-up the static IP Dialog Window (Fig. 7)
- → Check "Auto IP" (Fig. 8)
- → Click " Config Now" (The SE5002 will restart and obtain the IP from the DHCP server automatically)

Network Setting				
Please set the appropriate IP settings for this device				
☑ DHCP (Obtain an IP automatically)

## 3.2 Configuration by Telnet utility:

One may also use Telnet utility to change configuration settings.

D:\>telnet 10.0.50.100 23

→ Enter in the "Telnet IP\_address 23 ".( For example, Telnet 10.0.50.100 23). The system then prompts for a password, the default password is Null (Leave it blank). (Fig. 9)

 Image: Server

 Password: ■
 Image: Server

Fig. 9. Telnet to the system

**Note:** One may press the reset button to reset the password.

1 Then the following main menu shall appear (Fig. 10)

#### Notes:

- 1. If the SE5002 does not receive any command within 1 minute, Telnet will be terminated automatically.
- The changes of networking parameters will take effect only after the SE 5002 is exited and restarted.
   Select "1" from "*Input choice and enter (0~5):*" to enter "overview" .:(Fig. 11)

```

COM Type Selection (RS-232): Input choice and enter(1~7):

Fig. 18. Com port setting

Enter **3** from "*Input choice and enter (1~5):*" of COM1, by default COM port serial data buffer is enabled meaning that when TCP/IP Ethernet connection is broken, serial data collected from serial device will be emptied on SE5002 once TCP/IP connection is resumed, the serial data will be sent through Ethernet connection, one may disable it if one wish(Fig. 19)

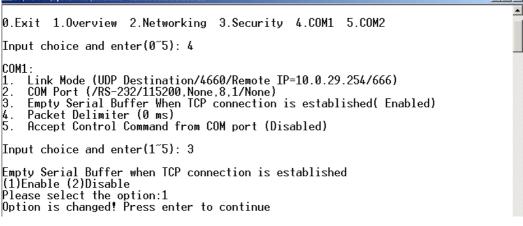

Fig. 19. Com port-Enabling serial data buffer

Packet delimiter is a way of controlling the number of packets in a serial communication. It is designed to keep packets intack. SE5002 provides two ways in parameter setting: 1. Packet delimiter timer and 2. Character pattern terminator. By default, packet delimiter timer is 1 ms. The range of packet delimiter timer is 0 to 30,000 msec, as shown in Fig. 20. If "character pattern is selected, for a data stream ended with "0x0a04", then the entire data buffer of the serial device is transmitted.

Fig. 20. Setting packet delimiter timer

One may also choose character pattern as the packet delimiter indicated in Fig. 21

SE5002 also is designed to accept serial control commands directly over Ethernet following the RFC2217 format. For more detail ,contact our Technical Support.

## 3.3 Configuring Using Web Browser

- 1. Make sure the PC is on the same network as SE5002
- 2. Open a web browser, then Enter in the same IP address as the SE5002. The default user name is **admin** and the default password is null **(leave it blank)**.
- 3. The SE5002's network, link mode and COM ports settings can be configured on different web pages.
- 4. Click "Save Configuration" to save settings.
- 5. Click "*Restart*" button to initial the change.

To modify settings through the web server interface, follow the steps below.

3.3.1 Log in

- 1. While on the web browser, Enter in the IP address of SE5002 of the URL. **Example: http://10.050.100**
- 2. The following authentication screen shall appear (Fig. 22) Enter desired **user name** and **password** then click on OK. The default user name is **admin** and the default password is null(left it blank).

Enter Netv	vork Passwor	d ?×
<b>?</b> >	Please type yo	ur user name and password.
<pre> {</pre>	Site:	10.0.50.100
	Realm	NeedPassword
	<u>U</u> ser Name	admin
	<u>P</u> assword	
	$\Box$ Save this p	password in your password list
		OK Cancel

Fig. 22. login the system via Web

3 The following overview screen shall appear (Fig. 23)

	Fig. 23. Overview	

3.3.2 Changing password
1. Click on the "Security" link and the following screen shall appear (Fig. 24)

	A	BLELink Ethernet	-Serial Server
Overview Networking Security	in the new p	<b>y</b> password is null, you can char assword to New Password ar at password is case sensitive	d Verified Password fields,
Security		Old Password	Jobololok
<u>COM1</u>		New Password	Jocobiok
COM2		Verified Password	Jockbook
		Save Configura	tion

Fig. 24. Change the password

 Enter the old password on "Old Password" field; enter the new password on "New Password" and the "Verified Password" fields, and then click on "Save Configuration" to update the password. Note: One may press the reset key on the product to reset password to the default value.

#### 3.3.3 Networking

Click on *"Networking"* link and the following screen (Fig. 25) shall appear. Fill in IP information on the **TCP/IP** field. Alternatively, click on **DHCP** to obtain **auto IP address, gateway and subnet mask**. Enable SNMP by checking "*Enable*"; fill in network identification information on **SNMP** and click on the "**Save Configuration**" button to save the changes. The changes will not become effective until SE5002 is restarted (Fig. 25)

Fig. 25. Network setup

#### 3.3.4 Configuring SE5002 as TCP server :

SE5002 is configured in a transparent mode by default (Fig. 26)

- → Click on "COM1" link and the following screen shall appear.
- ➔ Configure SE5002 as TCP server
- ➔ Input local listening port "4660"

#### 1.To enable IP filter :

- → Check "IP filter"
- → Input source IP on "*Source IP*"

#### 2.If not to enable IP filter :

- → Don't check "IP filter"
- → Input idle time on "Please input idle time to send TCP keep-alive packet(sec) : "( 2->the sending TCP keep-alive packet period will be 2\*10 sec)
- → Input TCP Inactivity time in "TCP Inactivity Time Before Disconnect( sec) : "( 2->TCP Inactivity beyond 2 sec will cause disconnect )
- → Click on "Save Configuration" button to save the changes

#### Notes:

- 1. One may configure COM1 or COM2 parameter by choosing COM1 or COM2 Link
- 2. IP filtering function is disabled by setting FILTER\_IP to "0.0.0.0".
- 3. IP filter is disabled by default
- 4. If IP filter is enabled, only source IP assigned is connected to SE5002.

	COM Type Selection	• RS232 • RS485 • RS422
		Save Configuration

Fig. 26. Com1 setup-TCP server

#### Notes:

- 1. Default COM1 of SE5002 is 4660 (COM2 is 4661) and it is associated with the serial port COM1 or COM2. After the application program being connected to the TCP port 4660 on the SE5002, data of ones application program are transparent to both COM1 and SE5002.
- 2. The serial interface may have different port interfaces for different models.

3.3.5 Configuring SE5002 as TCP client :

- → Configure SE5002 as a TCP client. For example, the destination IP is 10.0.29.11, and the destination port is 4660 (Fig. 27)
- → On destination IP, enter "10.0.29.11"
- → On destination port, enter "4660"
- → Input idle time on "Please input idle time to send TCP alive packet (sec) : "( 4->the sending TCP keep-alive packet period is 4\*10 sec)
- 1. Select "TCP Connect On Power-on" : It keeps trying to establish TCP connection after Power on
- 2. Select "*TCP Connect On Any Serial Character*" : Any serial character will trigger to establish TCP connection
- → Input idle time to disconnect on "Serial Inactivity Time before disconnect (Osec , 1~255):" (0->disable the function; 2 -> serial Inactivity beyond 2 sec will cause disconnect)
- → Input error retrying time on "Waiting Time Between Re-connect Attempts (0 minute,1~255) : "
  - (0->disable the function; 2->SE5002 trying to reconnect per 2 minutes)
- → Click on "Save Configuration" button to save the changes

Fig. 27. Com1 setup-TCP client

3.3.6 Pair Connection(Tunneling Mode)

Pair connection is for two or more serial connections with their own SE5002's to send data over Ethernet to communicate with each other. To do so, choose "*pair connection*" indicated in Fig. 28

			thernet-S	erial Server
<u>Overview</u>	LINK1

		TCP Inactivity Time	Before	

Fig. 28. Com1 setup -pair connection

3.3.7 Configuring SE5002 in UDP mode :

SE5002 can be configured on a UDP mode to establish connection using unicast or broadcast data from the serial device to one or multiple host computer. Vice versa is also true.

There are 2 UDP communication Modes :

1. **Master (Client) Mode**: To establish a connection using unicast or broadcast data from the serial device to one or multiple host computer.

Note : The configuration is limited by **Destination IP** and **Destination Port** 

Using broadcast data from a serial device to multiple host computers : For example, for **destination IP** "**10.255.255.255** "and **destination port** "**4660**", the host computer's IP addresses from

10.0.0.1~10.255.255.254 and **listening Port** at 666 can receive data sent from the serial device (Fig. 29)

Note : Broadcast IP address is limited by the Class of IP address and subnet mask. As an example, for a network of Class C subnet 192.168.1.X and a subnet mask of 255.255.255.0,,one may configure the broadcast IP address to be 192.168.1.255 (Fig. 31)

- → On "destination IP" enter 10.0.255.255 "
- → On "destination port " enter 666".
- → On "Local port " enter 4660".
- → Click on "Save Configuration" to save the changes. Note : If the update is successful, the following screen shall appear (Fig. 30)

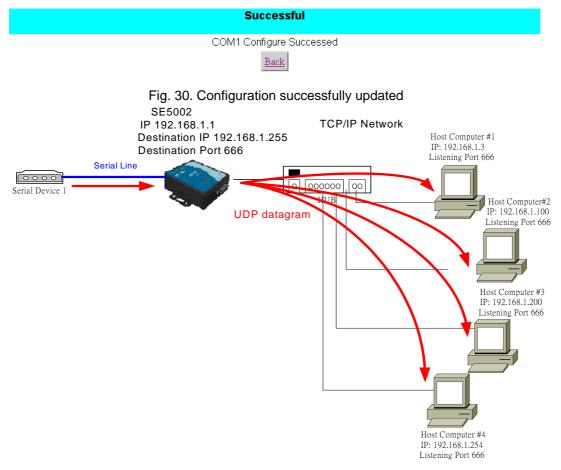

Fig. 31. Data Transmission in a UDP Master(Client) Mode

2. **Slave (Server) Mode**: To establish a connection using unicast or broadcast data from one or multiple host computer to a serial device. (Fig. 32)

Notes: The configuration is limited by the Local Listening Port (For example, on the SE5002 listening the port is 4660 which receives data from the Host Computer).

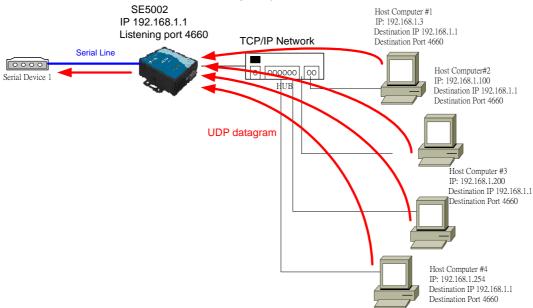

Fig. 32. Data Transmission in a UDP Slave(server) Mode

### 3.4 Assigning new IP Address with ARP commands

ARP (address resolution protocol) commands can be used to assign a static IP address on SE5002 using its hardware MAC (media access control) address. The MAC address"0060E9-xxxxx" is printed on the rear side of device . The following shows how it works on MS-DOS command prompt window. Example: change IP from 10.0.50.100 to 10.0.50.101, and MAC address being 00-60-e9-11-11-01

Step1: Add the new host IP to the ARP table

- ➔ Open Ms-DOS command prompt window
- → Input arp -s 10.0.50.101 00-60-E9-11-11-01(Fig. 33)

```
Fig. 33. Ms-DOS command prompt window: add host computer IP to ARP table
```

Step2: Change to the new IP via Telnet port 1(Fig. 34)

→ Input telnet 10.0.50.101 1

Note : Telnet will fail and then SE5002 restarts automatically. Afterward, the new IP address is changed to 10.0.50.101

Step3: Using the new IP to configure SE5002 via Telnet

#### → Input telnet 10.0.50.101

Note:

- 1. Both PC's IP and SE5002 's IP must belong to the same subnet.
- 2. The changed IP address must be legal; otherwise it will change back to the default value (10.0.50.100) after restart.

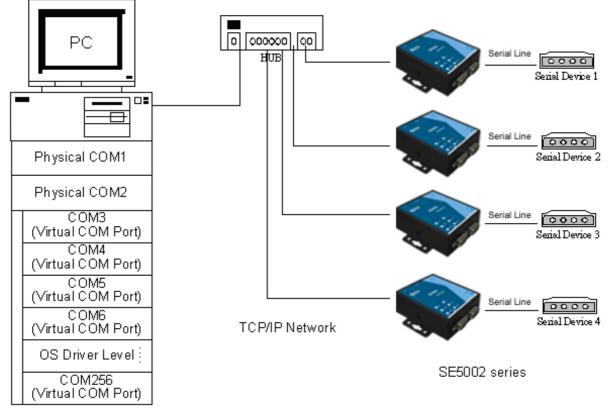

Fig. 34. Assigning a new IP address with ARP command

## 4. USING VIRTUAL COM

Virtual COM driver mode for windows converts COM data to LAN data for control of the COM port on SE5002 via LAN. By creating virtual COM ports on the PC, the Virtual COM driver redirects the communications from the virtual COM ports to an IP address and port number on a SE5002 that connects the serial line device to the network. Fig. 35 illustrates a Virtual COM connection diagram.

Copyright © 2006 Atop Technologies, Inc.

All rights reserved. Designed in Taiwan.

## 4.1 Setup of a virtual COM driver

#### 4.1.1 PC requirements

- Processor: Intel-compatible, Pentium class or faster
- Operation system: Windows Server 2003, Windows XP, Windows 2000, Windows NT 4.0 SP5 or later, Windows Me, Windows 98, Microsoft NT/2000 Terminal Server, Citrix Meta Frame

#### 4.1.2 Cautions on Use

The Virtual COM driver supports firmware AP v3.0 or later for the SE5002 Ethernet Serial Server.

### 4.1.3 Limitation

The Virtual COM driver provides users with up to 256 Virtual COM ports. Users may select from COM1 to COM256.

#### 4.1.4 Installation

Make sure to turn off all anti-virus software before installation. Run the Virtual COM setup file included in the CD to install Virtual COM driver.

Select one or two COM port to become the Virtual COM ports.

4.1.5 Uninstalling

- 1. From Windows Start menu select Setting, Control Panel, Add/Remove Programs.
- 2. Select **Serial IP** in the list of installed software.
- 3. Click the **Add/Remove** button to remove the program, or From Windows Start menu select Programs, Serial IP for ATOP, **Uninstall Serial IP** to remove the program.

#### **4.2 Virtual COM communications**

4.2.1 Enabling Virtual COM on SE5002

From the web browser, access SE5002 by typing its IP address. Click on **COM1** link to access COM1 window. On the window, click on "*TCP Server*" and check "**Enable**" button. Then Enter in the local port number on "*Local Port*" field as indicated in Fig. 36

		ABLELink E	thernet-S	erial Server

On the right of the panel is a sample for COM 4 settings. On the left is the list of the COM ports that have been selected (on **Select Ports** window) for use by the Virtual COM Redirector. Change the list by clicking the **Select Ports** button.

Each COM port has its own settings. When click on a COM port, the Control Panel changes to reflect that the selected port.

Note: COM port changes become effective immediately.

## 4.3 Configuring Virtual COM Ports

Serial/IP COM port can be changed as follows:(Fig. 39)

- 1. Select a COM port on the list.
- 2. On IP Address of Server, enter the serial serve IP address.
- 3. On Port Number, enter the TCP port number of the serial server.
- 4. On **Server Credentials**, the default is **No Login Required**. If the serial server does require login by the Virtual COM Redirector, the Virtual COM Redirector must provide a username and/or password every time an application tries to access the serial server.
- 5. Click the **Configuration Wizard** button and then click the **Start** button that shall appear on the wizard window. This step verifies that the Virtual COM Redirector communicates with the serial server. If **Log** display does not show errors, click **Use Settings**, return to the Control Panel (Fig. 39)

## 5. SNMP SETUP

## **5.1 SNMP Network Management Platform**

SE5002 is an SNMP device that allows many popular SNMP Network management platforms such as HP Open View and Sun Net Manager, to conduct on the SerialManager.

Depending on the network management tools used, SE5002 information can be collected from running the management tools, including **IP address, DNS name, system descriptions and NIC** information.

## 5.2 Using NetworkView: An Example

NetworkView is a free compact network management tool from NetworkView Software, Inc.

(<u>www.networkview.com</u>). It discovers all TCP/IP nodes in a network using DNS, SNMP and ports information and documents with printed maps and reports for future use.

First, download and install the tool on ones PC (Windows 2000 and Windows XP), then start NetworkView.

1. Click on the button to open a new file. The following screen shall appear, on **Addresses field**, Enter in the IP address range for searching (Fig. 40).

Discover		X
Map Information Title Description Author		
Discovery type C Single address C <u>B</u> ange C Sub <u>n</u> et	Addresses Start 10 . 0 . 50 . 1 > End 10 . 0 . 50 . 101 >	
	<u>S</u> ettings <u>D</u> k <u>C</u> ancel <u>B</u> lank	

- Fig. 40. IP address searching
- 2 Click on "OK" and the following dialog box shall display the searching progress (Fig. 41)

#### Notes:

- 1. NetworkView is limited to information extracting and viewing only.
- 2. To modify the configurations, use the web server, Telnet or SerialManager configuration utilities.

## **6 WRITING ONES OWN APPLICATIONS**

Before writing ones own host applications or programs to interact with SE5002, make sure one have done the following.

## 6.1 Preparing System

- 1. Connect SE5002 to power, Ethernet and serial cables
- 2. Configure SE5002: connection type, IP address, gateway IP address, and network mask (see chapter 3 Hardware Installation).
- 3. Configure SE5002 as TCP Server, using the default TCP port number 4660.
- 4. The host (PC) application program must be configured as a TCP client and connected to SE5002 with designated TCP port number 4660 for COM1.
- 5. Check SE5002 running status through SerialManager configuration utility.

## 6.2 Running Sample Program

Sample programs written in VB and VC++ included in the package are provided for your reference; their source codes are also included. Test program can be found on the product CD in the directory of **\sample\vb ap\** and **\sample\vc ap** respectively.

Two test programs, TCPTEST in Visual Basic and TCPTEST2 in Visual C++ are included.

#### 6.2.1 TCPTEST in Visual Basic

This sample program(see below), written in Visual Basic 5.0 with Winsock Controls, shows how to exchange data between host (PC) and SE5002 via Ethernet in two socket ports.

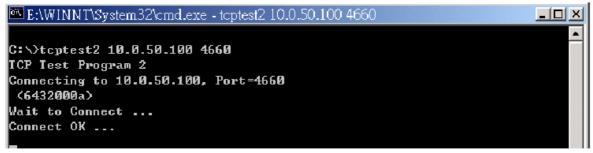

One may start the sample program tcptest.vbp to test different functions. For more information, press **Help**. **Note**: Be sure Microsoft visual studio family or its equivalent software is installed.

6.2.2 TCPTEST2 in Visual C Enter in the following command on the command line prompt to run the program: TCPTEST2 IP\_Address Port\_Number

The command *tcptest2 10.0.50.100 4660* connects a TCP server of IP address *10.0.50.100* to port number *4660*. The received data is displayed on the screen and the input data is sent to the TCP server. Binary data in hex format with a leading character "\" can also be sent. For example, "\00" and "\FF" represent ASCII code 0 and 255, respectively.

A modem can also be used to connect to the serial server. Command "*AT\Od*" sends standard AT command to the modem which in return responds with "*OK\OD\OA*" message to the host application. Always use '=' then **Enter** key to exit the program.

## 7 Diagnostics

There are several ways to check the status and availability of SE5002.

## 7.1 Using Standard TCP/IP Utility ping Command

Go to Windows **Start** menu, select **Run** and Enter in "**ping <TCP Server IP address>**". If the connection is established, the Reply messages are displayed; otherwise it will indicate Request timed out.

```
C:\WINN T\system32\cmd.exe
                                                                             _ 🗆 🗵
C:∖>ping 10.0.50.100
Pinging 10.0.50.100 with 32 bytes of data:
Reply from 10.0.50.100: bytes=32 time=10ms TTL=64
Reply from 10.0.50.100: bytes=32 time<10ms TTL=64
Reply from 10.0.50.100: bytes=32 time<10ms TTL=64
Reply from 10.0.50.100: bytes=32 time=10ms TTL=64
Ping statistics for 10.0.50.100:
   Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
   Minimum = Oms, Maximum = 10ms, Average = 5ms
C:\>ping 10.0.50.100
Pinging 10.0.50.100 with 32 bytes of data:
Request timed out.
Request timed out.
Request timed out.
Request timed out.
Ping statistics for 10.0.50.100:
   Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

# 7.2 Using SerialManager Configuration Utility Program

Use SerialManager configuration program on the product CD to check the status of SE5002. The status and version can be read from the tool.

# 7.3 Using TCPTEST.EXE or TCPTEST2.EXE Sample Program

Sample programs TCPTEST.EXE and TCPTEST2.EXE can be used to check the status of SE5002. Refer to chapter 6.2 for running the sample programs.

### **Appendix A: Specification**

#### A.1. Hardware Specification

	Specifications
CPU	16-bit Embedded CPU
	• 100MHz
Flash Memory	512K Bytes
SDRAM	• 512K Bytes
EEPROM	• 512 Bytes
Host Communication	IEEE802.3 base band
	<ul> <li>TCP/IP, UDP, SNMP, HTTP, Telnet, ARP, BOOTP, DHCP, ICMP</li> </ul>
Reset	Built-in default key to restore factory default settings
Watch Dog Timer	Software watch dog to auto reset
Serial Port	Two RS-232 or RS-485/RS-422 selectable
Communication	<ul> <li>RS-232: EIA-RS-232C standard, Full Duplex, DB9</li> </ul>
	<ul> <li>RS-485: 2/4 wires, Half/Full duplex, Terminal Block</li> </ul>
	RS-422: 4 wires, Half/Full duplex, Terminal Block
	Parameters

## A.2. Software Specification

Item	Specifications
Protocol	TCP, UDP, ARP, ICMP, SNMP, HTTP, Telnet, BOOTP, DHCP
Configuration	<ul> <li>Configuration information for both TCP/IP and serial ports is written in the EEPROM.</li> </ul>
	<ul> <li>Configuration utilities of Windows 98/2000/NT/XP/2003 are provided.</li> </ul>
Internal Buffer Size	<ul> <li>TCP receiving buffer size = 8K bytes</li> </ul>
	<ul> <li>TCP transmitting buffer size = 16K bytes</li> </ul>
	<ul> <li>RS-232 or RS-485/RS-422 receiving buffer size = 4K bytes</li> </ul>
	<ul> <li>RS-232 or RS-485/RS-422 transmitting buffer size = 4K bytes</li> </ul>

#### A.3 Panel Layout and Connector Pin Assignments

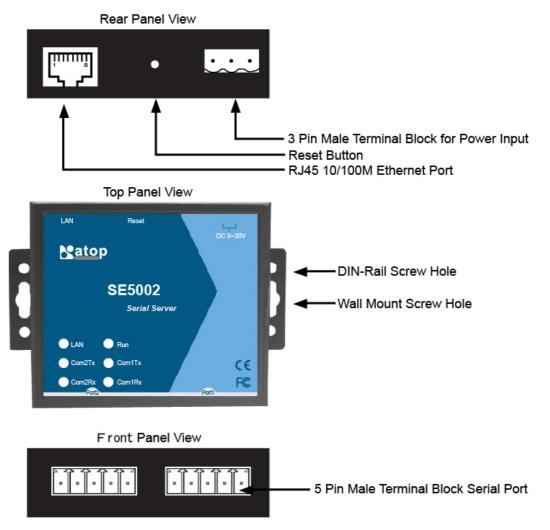

#### A.3.1. Panel Layout

A.3.1.1 DB9 for SE5002 (RS-232/RS-422/RS-485)

#### A.3.1.2 SE5002-S55is (RS-422/RS-485)

### A.3.2.1 DB9 Pin Assignments

The pin assignments of DB9 connector on SE5002 are shown in the following table:

Pin#	RS-232 Full Duplex for SE5002 Model	RS-485/RS422 2 wire, Half Duplex for SE5002 Model	RS-485 4 wire, Full Duplex for SE5002 Model
1	DCD	N/A	N/A
2	RXD	N/A (reserved)	TXD+
3	TXD	DATA+	RXD+
4	DTR	N/A	N/A
5	SG (Signal Ground)	SG (Signal Ground)	SG (Signal Ground)
6	DSR	N/A	N/A
7	RTS	DATA-	RXD-
8	CTS	N/A (reserved)	TXD-
9	N/A	N/A	N/A

Copyright © 2006 Atop Technologies, Inc.

All rights reserved. Designed in Taiwan.

#### A.3.2.2 Terminal Block Pin Assignments

The pin assignments of Terminal Block connector on SE5002-S55is are shown in the following table:

Pin#	RS-485/RS-422 4 wire, Half Duplex For SE5002-S55is	RS-485 2 wire, Full Duplex For SE5002-S55is
1	T+	NC
2	Т-	NC
3	R+	Data+
4	R-	Data-
5	SG (Signal Ground)	SG (Signal Ground)

#### A.3.3 Ethernet Port (RJ-45) Pin Assignments

1. Category 5 UTP cable, 8 core wire.

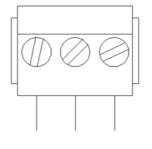

3. RJ45 Pin Assignment

Pin Assignment	568A Definition	568B Definition
Pin1	Green-White	Orange-White
Pin2	Green	Orange
Pin3	Orange-White	Green-White
Pin4	Blue	Blue
Pin5	Blue-White	Blue-White
Pin6	Orange	Green
Pin7	Brown-White	Brown-White
Pin8	Brown	Brown

canon RJ-45, choose either 568A or 568B definition. Use 568A and 568B definition, respectively for a crossover cable,

(1sec)	
^^^^^	Memory problem, return service is required
^^	Startup OK but AP firmware is disabled
(5sec)	
^^	Startup OK and AP firmware is enabled
(5sec)	
	Table 4. Durran Massana

#### Table 1. Buzzer Message

#### A.4.2 LAN

Message	Description
LED Off	Ethernet Disconnected
LED blinking with Green	Data is transmitting on Ethernet for 100Mbps
LED blinking with Orange	Data is transmitting on Ethernet for 10Mbps
	Table 2   AN   ED Message

#### Table 2. LAN LED Message

#### A.4.3 COM Port

Message	Description
COM1(2) TX LED off	No data is transmitting on COM port
COM1(2) TX LED on blinking state	Data is transmitting on COM port
COM1(2) RX LED off	No data is receiving on COM port
COM1(2) RX LED on blinking state	Data is receiving on COM port

#### Table 3. COM Port LED Message

#### A.4.4 RUN

Message	Description
LED on	Jumper JP1 pin1 and pin2 are shorted to disable AP firmware in the flash memory.
LED blinking (rate: 0.5Sec)	AP firmware is running
Table 4. RUN LED Message	

# Appendix B: Upgrade System Firmware

New version of firmware can be downloaded from www.Atop.com.tw

#### **B.1 System Upgrade Procedure**

- 1. Make sure the PC and the SE5002 are on the same network. Use command **ping** or **SerialManager** program to verify their availability.
- 2. Prepare the download tool and press any key to edit the configuration file dapdl.cfg.

📸 DOWNLOAD	
Auto 💽 🛄 🖻 😰	
Following would Edit download Please update the destination Press any key to continue —	IP address and downloaded file

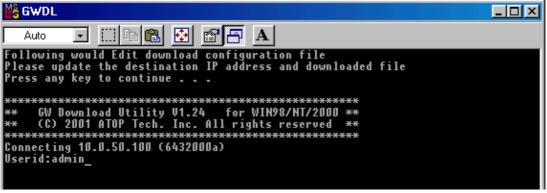

3. Edit **"dapdl.cfg"** to fit the system requirements, the contents of the file shall look like the following window. Be sure to save your modifications.

#### Remote\_IP 10.0.50.100

#### Load U5002.hex

The first line identifies the IP address of SE5002; the second line identifies the firmware (.Hex file) name to be downloaded.

- 4. Run download.bat.,.
- 5. Input user name and password credential to begin new firmware download.

6. SE5002 will automatically restart after downloading.

🗱 Finished - DOWNLOAD
Following would Edit download configuration file Please update the destination IP address and downloaded file Press any key to continue
**************************************
Downloading U21wmap.hex
Total 1 files downloaded

## **B.2 Critical Issues**

- 1. The upgrading process can be aborted by pressing the **<Esc>** key. SE5002 will restart automatically and the system remains the same.
- 2. If SE5002 does not receive any upgrading data within **30 seconds**, it will restart automatically and the system remains the same.
- 3. After the upgrading process is done, SE5002 will program the flash memory, and the buzzer beeps 6 times before restarting. It takes around 10 seconds to complete the programming process. If an error occurs during the programming process, SE5002 will clear the corresponding memory and the system remains the same before the process.

### **B.3 Error Messages**

Firmware upgrade may not be successful if errors occur during the process.

Error Cause	Message	Comments
Illegal Hex file format	Hex File Text Error	
	Hex File Check-Sum Error	
	Hex File Format Error	
	Hex File End of Record Error	
SE5002	SE5002 ACK Start Address Error	
handshaking problem	SE5002 ACK Length Error	
	SE5002 Response Command Error	
Configuration file	Remote IP not found	
	Open configuration file failure	

# Appendix C: Re-loading System Firmware

The AP (application program) firmware of SE5002 can be disabled If a wrong version is downloaded. To disable the current version of firmware and re-load the correct one, do the followings:

- 1. Turn power off, open SE5002 case.
- 2. Short pin1 to pin2 on jumper JP1 (on the right-top corner of the main board) to disable the current AP firmware.
- 3. Turn SE5002 power on.
- 4. Download the correct AP firmware. .
- 5. Open pin1 and pin2 on jumper JP1 to enable AP firmware.
- 6. Close the case and continue operations.

### Appendix D: Using SerialManager

## **D.1. SerialManager Introduction**

**SerialManager**, developed by ATOP, is a special tool for device management and configuration, and can realize the daily management on various ATOP network devices for address search, device positioning, parameter configuring, firmware downloading and so on.

## **D.2. Interface**

The operating interface of the SerialManager shown as below:

lain r	menu		Device details

## D3.1.1 Broadcast Search

Once **Broadcast Search** is selected, a box will pop up as below:

Broadcast Search	
Input one to broadcast:	Add
255 . 255 . 255 . 255	Delete
Select one to broadcast:	Delete
	<u>o</u> k
	Cancel

The user may type in or select different broadcast address based on his/her own requirement.

### D3.1.2 Search by IP address

Once Search by IP Address is selected, an interface will pop up as below:

Search Devi	ices by	IP Ad	dress	es			×
Select an I	IP addres	s to s	earch				_
(10.0.50.1	50					New	
						Delete	
					_		
Search (	devices i	n the r	ange o	of IP a	ddress	5	
□  P address	s range –						
From:	0		0		0	. 0	1
To:	0		0		0	. 0	1
				ок		Cancel	
				20			

Here user may have two options: Select an IP address to search or Search device in the range of IP address.

## D3.1.3 Search by MAC Address

If **Search by MAC Address** is selected, another box will pop up as below:

Search Devices by MAC Addresses	×
Select a MAC address to search	
New	
Delete	1
Search devices in the range of MAC address	
MAC address range	
From: 00 : 60 : E9 : 00 : 00 : 00	
To: 00 : 60 : E9 : FF : FF : FF	
<u>Q</u> K <u>C</u> ance	:

Here the user may search in two ways: Search a MAC address to search or Search devices in the range of MAC address

#### D3.1.4 Rescan

Once the user click the **Rescan** button on the toolbar, the SerialManager shall re-search devices by using the current search way.

## D3.2 Firmware

This function is applied to downloading a firmware into a selected device.

Emmassic       Configuration       First View       Help         Upgrade from Disk       ChiHD       View       Help         Download Parameter       ChiHP       View       Mack       Host Name       Ko         Caution       Model       IP Address       MAC Address       Host Name       Ko         SE5404       10.0.156.222       00:60:E9:11:11:22       V2         SE5016       10.0.68.100       00:60:E9:01:BB:7C       V1         SE5016       10.0.100       00:60:E9:01:C1:7C       V1         SE5016       10.0.162.100       00:60:E9:00:00:03       V2         SE5002       10.0.161.102       00:60:E9:00:261:E7       V2         SE5002       10.0.161.102       00:60:E9:00:61:E7       V2         Gew GW51C-MAXI       10.0.195.122       00:60:E9:00:FA:3B       V2         @       GW51C-MAXI       10.0.195.121       00:60:E9:00:FA:37       V2         @       GW51C-MAXI       10.0.195.120       00:60:E9:00:FA:37       V2

In addition for some devices with JFFS2 file system supported, the user can download the related parameter data into the device that supports the JFFS2 file system through a submenu **Download Parameter**. See details as the figure below:

Download Parameter File from Disk	<
Please select a parameter file from the disk, and then download it to the device SE5002 (10.0.50.150).	
D:\SE5016 Standard Edition_89890056 V1.5\configure utility	
OK <u>C</u> ancel	

**Note:** Some of old firmware version did not support SerialManual firmware upgrade function. Please refer to appendix "Upgrade System Software "for detail.

#### **D3.3 Security**

This function is applied to the security protection for the network devices, so as to supply some necessary protection to a device for configuration modifying, configuration leading-in and leading-out, and some other important functions. Here three functions are mainly supplied, including: **Login**, **Logout** and **Change Password**, shown as the figure below:

## D3.3.1 Login

This function is applied to the login to any network device, as some important devices can only be operated after a successful login, shown as the figure below:

Login		×
Enter a user i device.	name and password to login to this	
Device:	SE5002 IP:10.0.50.150	
User Name:	admin	
Password:		
Г	Apply for all selected devices	
	Login Cancel	

The user can also select several devices at one time, and log in them at the same time by selecting **Apply** for all selected devices.

#### D3.3.2 Logout

This function is applied to the logout from any network device, as the user should always carry out a logout after he/she has finished the operating action to any important device, shown as the figure below:

Logout 🗙
Do you really want to logout from this device (SE5002, IP:10.0.50.150)?
Apply for all selected devices
Logout Cancel

The user can also select several devices at one time, and log out them at the same time by selecting **Apply** for all selected devices.

### D3.3.3 Change Password

This function is applied to modifying the password for logging in any network device, but can only be realized after a successful log-in, shown as the figure below:

Change Password	
- · · · ·	5002, IP:10.0.50.150) password, g information and then click OK.
Old Password:	
New Password:	
Verified Password:	
Apply for	all selected devices
	OK <u>C</u> ancel

The user can also select several devices at one time, and modify their pins at the same time by selecting **Apply for all selected devices**.

### **D3.4 Configuration**

This function is applied to the configuring, import and export of work parameters for any network device, and here are mainly supplied with: 'Network ...', 'COM Port...', 'Locate', 'Reset', 'Erase Flash', 'Import Setting...', 'Export Setting...', 'Virtual COM...', 'Config by IE' and 'Options', and some other application functions. The user can carry out a configuration operating through

menu or by clicking the corresponded button on the toolbar, shown as the figure below:

Locate	Ser Search	 Janager	twork Y4.0 Configuration Sec		DM rt	Import Setting	Expor Settin	
		<b>2 1</b>	<u>N</u> etwork SNMP	C <b>trl+N</b> Ctrl+S				
	No.	Caution	COM <u>P</u> ort	Ctrl+P	Address	MAC Address	Host Name	Kernel 📥

## D3.4.1 Network ...

The user can modify the IP address of any selected device, shown as the figure below:

Network Setting 🛛 🔀						
Please set the appropriate IP settings for this device (SE5002, 10.0.50.150).						
🔲 DHCP (Obtain an	IP automatically)					
IP address:	10 . 0 . 50 .150					
Subnet mask:	255.255.0.0					
Gateway:	10 . 0 . 0 .254					
Host name:	name					
<u>O</u> K	Cancel					

#### D3.4.2 COM Port ...

ATOP has developed various network products, and some of the ATOP devices are specially supplied to some serial-port servers, while this function is applied to the configuration of COM port parameters.

Note: This function can be realized only after a successful login, shown as the figure below:

COM Ports Setting (SE5002, 10.0.50.150)	X
COM1 COM2	
Link mode: C TCP server mode  C UDP mode  Option	
COM property: <u>R</u> efresh	
Alias name: Port type: © R\$232 © R\$485-2W © R\$485-4W	
Baud rate:       Data bits:       Parity: <sup>6</sup> 600 <sup>1</sup> 9200 <sup>7</sup> 7 bits <sup>6</sup> None <sup>1</sup> 1200 <sup>3</sup> 8400 <sup>8</sup> 8 bits <sup>0</sup> Odd <sup>2</sup> 2400 <sup>5</sup> 7600 <sup>8</sup> Stop bits: <sup>0</sup> Mark <sup>6</sup> 9600 <sup>1</sup> 1 <sup>2</sup> 2 <sup>8</sup> Space	
Packet delimiter:       Flow control:         Timer       Image: Organization of the second sec	
☐ Apply for all selected same model devices 確定 取消	

The user can also select several devices at one time, and carry out the configuration for them at the same time by selecting **Apply for all selected same model devices** 

Note:

- 1 · COM tags: generated automatically according to the COM port number of the device. If a device has 4 COM port, there will be 4 tags: respectively COM1, COM2, COM3, COM4, and the like.
- 2 · Connecting mode: it means the connecting mode between the serial-port server and other network devices. Each COM corresponds to a connecting mode through which the transferring data will not be interfered by that in another connection. The user can set each corresponded connecting mode and the working parameter by clicking the button "Option", shown as the figure below:

TCP Server Mode		TCP Client Mode 🛛 🔀
Local port: 4660 Specify IP address: Enable virtual COM mode OK		Destination IP address: 10 . 0 . 29 . 123 Destination port: 666 ✓ Enable virtual COM mode <u>OK</u> <u>C</u> ancel
TCP Server mode		TCP Client mode
	UDP Mode	
	Destination IP addr 0 . 0 Destination port: Local port: <u>Q</u> K	ess: . 0 . 0 1 0 <u>C</u> ancel

UDP mode

3 · COM port property: it mainly represents the working parameter of the serial port setting, including: serial-port working type, baud rate, data bit, stop bit, parity bit, data packet delimiter and flow control, etc.

### D3.4.3 Locate

The user can apply this function to locate a device when he knows it's IP address, but doesn't know its position. If a device is selected, the device will appear with singing by which the user can locate the device through the submenu option **Locate** or clicking the **Locate** button on the toolbar.

### D3.4.4 Reset

The device should be restarted after a successful modification of parameter configuration. And the user can carry out a restart through the submenu option **Reset**.

### D3.4.5 Erase Flash

Some devices are supplied to the user with a certain capacity of Flash memory to save the user's data. And the user can erase the Flash through the submenu option **Erase Flash** or clicking the **Erase Flash** button on the toolbar when the memory capacity is to be used up or the history data are unnecessary to be saved.

## D3.4.6 Import Setting ...

If a network has a large number of devices which are used for a same purpose, it would be very complicated to carry out the parameter configuration for each of the devices in the network one by one, while the user can import the parameter information of a standard parameter file directly into all the devices of the network through the submenu option **Import setting** ... or clicking the **Import setting** ... button on the toolbar, thus the work procedures can be largely reduced, shown as the figure below:

Import a file to SE50	01-85			
Open a file: D:\D	evice Manager 3	.1\Setting	gs\SE5001-S2.a	adm
Model: SE5001	62			
	-52			
-IP setting:			-SNMP setting	r
IP address:	10.0.50	.100	Name:	name
Subnet mask:	255.255.0	. 0	Location:	location
Default gateway:	10.0.0	. 254	Contact:	contact
COM ports setting:				
Selected COM Port:	COM1	•	·	
Туре:	RS232	Alias	name:	
Baud rate:	9600	Data I	bits: (	8 bits
Stop bits:	1 bit	Parity	: 1	None
Flow control:	None			
Packet delimiter:		2 ms		
Keep serial buffer:		Disab	led	
Link mode:	TCP server	mode / V	irtual COM: Disa	abled
	Local port: (	4660		
🗖 Apply for all select	ed devices have	e same m	odel	
Popup this dialog v	vhen import setti	ngs to th	e next device	
			<u>o</u> k	Cancel

The user can also select several devices at one time, and lead the parameter information of a standard parameter file into all the selected devices by selecting **Apply for all selected devices have same model**.

## D3.4.7 Export Setting...

If a network has a large number of devices which are used for a same purpose, it would be very complicated to carry out the parameter configuration for each of the devices in the network one by one, while the user can save the parameter information of a standard device into a parameter file through the submenu option **Export setting...** or clicking the **Export setting...** button on the toolbar, thus the parameter information can be led in over again from this parameter file when the user is to carry out a configuration for any other device, shown as the figure below:

Export SE5002 Settings		
IP setting: IP address: 1 Subnet mask: 25		d0a Ibled irtual COM: Enabled
Save to a file: D:\SE	Destination port: 66	
Save to a file: D: SE		on_89890056 V1.5\configu
C Popup this dialog v		settings
C Automatically gene	rate the next file nar	me
		OK <u>C</u> ancel

The user can also select several devices at one time, and save the parameter information of these selected devices into a designated parameter file by selecting "Save all the selected devices".

### D3.4.8 Virtual COM

Some devices are supplied with the function of virtual serial port, and the user can carry out any related setting through the submenu option "Virtual COM", shown as the figure below:

Virtual COM Settin	es 🛛 🔀
Select Port:	<b></b>
Server IP:	10 . 0 . 50 . 150
Server Port:	4660
	Set
	Advanced Close

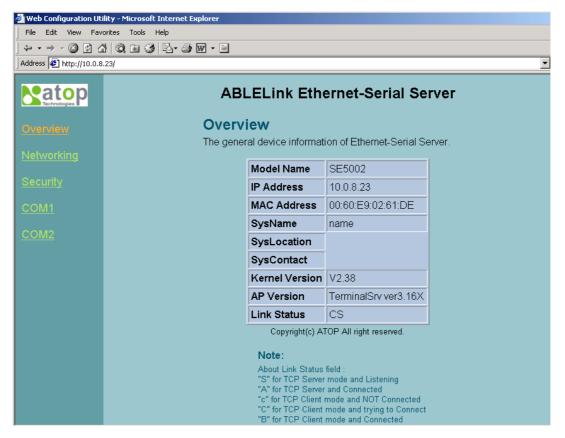

Copyright © 2006 Atop Technologies, Inc.

All rights reserved. Designed in Taiwan.

# D3.4.9 Configure by IE

Some devices are supplied with build-in Web servers, and the user can carry out any parameter setting directly through the submenu option **Config by IE**, shown as the figure below:

#### D3.4.10 Option

The option is mainly applied to setting some common work rules of SerialManager, such as: search for the time interval of a network device, or whether to display any device indication and so on, shown as the figure below:

#### D3.5 View

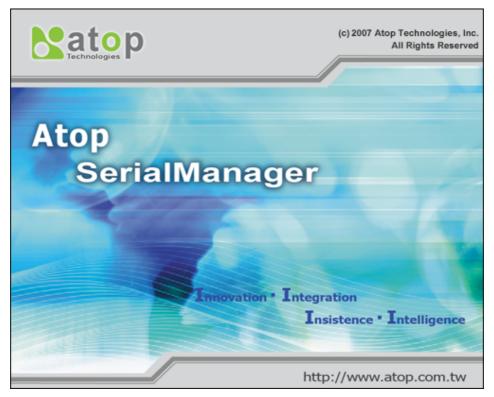

The user can select a display mode of the network device according to his/her own requirement through the menu option "View", such as: display in sequence of device module name, or display in sequence of IP address and so on, shown as the figure below:

	1 🛟 🖇	) 🥭 🛃	<b>*</b> 8. W	Dr. Dr		
ø No.	Caution	Model	IP Address	MAC Address	Host Name	Kernel

7	@	GW51C-MAXI	10.0.195.121	00:60:E9:01:8C:18		V2.45
8	@	GW51C-MAXI	10.0.195.120	00:60:E9:00:FA:37		V2.43

### D3.6 Help

This function is mainly applied to displaying some help information of the SerialManager, shown as the figure below:

Copyright © 2006 Atop Technologies, Inc. All rights reserved. Designed in Taiwan.
